

#### List of Needed Parts:

- Camera
  - Currently, the cameras cannot move by themselves. The cameras are also not included in the list of usable cameras on the robot. This is a problem because the robot can no longer map a room from a stationary location.
- Battery
  - The batteries in the robots have a problem holding a charge. While connected, the robot still occasionally shuts off.
- Charger
  - An additional charger is needed because there are two robots. In addition, the current charger is starting to weaken.
- Robot computer
  - One of the computers attached to the robots needs to be replaced. It has a broken mouse port. In addition, running a program will cause the robot to stall.
